Purpose
The purpose of this award is to equip the learner with the knowledge, skill and competence in the structure and functions of the human body to enable the learner to understand the contribution made by the body's systems to participation in sports and exercise.

Learning Outcomes
Learners will be able to:

1. Differentiate between cells, tissues, organs and systems
2. Classify tissues into the four main groups; epithelial, connective, muscle and nervous tissue
3. Identify the major types of connective tissue
4. Outline the composition of bone, including the functions of the skeleton, the main bones of the appendicular and axial skeleton and the structure of a typical long bone
5. Identify the major categories and functions of joints, differentiating between the types of synovial joints
6 Identify a range of postural defects and how they impact on sports performance and injury

7 Identify the three types of muscle in the body with examples of each

8 Identify the main skeletal muscles of the body

9 Show the interconnections between the skeletal and muscular systems in body movement

10 Describe the sliding filament theory of muscle contraction

11 Outline the different types of muscular contraction using sporting contexts

12 Identify with examples of the main actions of muscles to include flexion, extension, abduction and adduction

13 Outline the structure and functions of blood and its role in sports performance

14 Describe the function of the heart including, the structure of arteries, veins and capillaries, the cardiac cycle and the flow of blood through the main blood vessels and blood pressure

15 Examine the short term and long term effects of strenuous exercise on the cardiovascular system

16 Identify the parts of the digestive system, including its associated organs and their functions

17 Outline the composition of protein, fats and carbohydrate and outline the five stages of digestion

18 Explain how the Adenosine Triphosphate (ATP) system-fuels muscle contraction during exercise to include the three different biochemical systems; phosphagen, glycogen-lactic acid and aerobic respiration

19 Explain the effects of lactic acid production during anaerobic exercise

20 Outline the aerobic and anaerobic energy pathways that supply energy for different intensities of exercise

21 Describe the structure of the respiratory system

22 Describe the processes of inspiration and expiration including the role of muscles, blood and the nervous system
23 Discuss the short term and long term effects of strenuous exercise on the respiratory system

24 Outline how the cardio-respiratory system and aerobic performance can be positively or adversely affected to include; altitude training, blood doping, anemia, smoking

25 Differentiate between the Central, Peripheral and Autonomic Nervous Systems, explaining how reflex action works

26 Explain the role that conditioned reflex and feedback plays in acquiring skills in sport

27 Explain how homeostasis works

28 Differentiate between endocrine and exocrine glands

29 Explain the role of hormones in metabolic processes, including the effects of over secretion and or under secretion of insulin, thyroxine and growth hormone and the difference between a nervous system and a hormonal system

30 Outline the special role that adrenaline plays in sports performance

31 Describe the structure and functions of the skin and skins role in temperature regulation

32 Describe the advantages and disadvantages of vasodilation, vasoconstriction, shivering, goose pimples and sweating in the regulation of the body’s temperature during exercise.

**Assessment**

**General Information**

All assessment should be planned in accordance with the programme assessment strategy developed as part of the programme submission for validation. See Policies and Criteria for Validation of Programmes. Assessment should be undertaken consistently and reflect current assessment guidelines. See www.qqi.ie.

All FET assessment is criterion referenced. Successful achievement of the award is based on learners attaining the required standards of knowledge, skill or competence consistent with the minimum intended programme learning outcomes.

The techniques set out below are considered the optimum approach to assessment for this component. In exceptional
circumstances providers may identify alternative assessment techniques through the provider's application for programme validation which are reliable and valid but which are more appropriate to their context.

Assessment of a number of components may be integrated across programmes for delivery, provided that the learning outcomes of each minor award are assessed.

Group or team work may form part of the assessment, provided each learner's achievement is separately assessed.

All providers are required to submit an assessment plan as part of their application for programme validation. Assessment Plans will include information relating to scheduling and integration of assessment. See current FET validation guidelines at www.qqi.ie.

**Assessment Techniques**

In order to demonstrate that they have reached the standards of knowledge, skill and competence identified in all the learning outcomes, learners are required to complete the assessment(s) below.

The assessor is responsible for devising assessment instruments (e.g. project and assignment briefs, examination papers), assessment criteria and mark sheets, consistent with the techniques identified below and QQI’s assessment requirements.

Programme validation will require providers to map each learning outcome to its associated assessment technique. All learning outcomes must be assessed and achieved in accordance with the **minimum intended module learning outcomes** set out in the validated programme.

**Description**

**Examination - Theory**

An examination provides a means of assessing a learner’s ability to recall and apply knowledge, skills and understanding within a set period of time and under clearly specified conditions.

A theory-based examination assesses the ability to recall, apply and understand specific theory and knowledge.
Assignment

An assignment is an exercise carried out in response to a brief with specific guidelines as to what should be included. An assignment is usually of short duration and may be carried out over a specified period of time.

Recognition of Prior Learning (RPL)

To support the development and implementation of RPL with regard to access, granting credit/exemptions and achievement of awards/parts of awards, providers should refer to QQI’s Statutory Guidelines for Quality Assurance, the Policies and Criteria for Validation of Programmes and the Principles and Operational Guidelines for the Recognition of Prior Learning in Further and Higher Education and Training available at www.qqi.ie

Specific Validation Requirements

There are no specific validation requirements

Supporting Documentation

None

Access

To access programmes leading to this award the learner should have reached the standards of knowledge, skill and competence associated with the preceding level of the National Framework of Qualifications. This may have been achieved through a formal qualification or through relevant life and work experience.

Transfer

Successful completion of this component award enables the learner to transfer to programmes leading to other certificates where this component is a mandatory or an elective requirement.

2. FET Award Standards

QQI award standards are determined within the National Framework of Qualifications (NFQ), http://www.nfq-qqi.com. QQI determines standards for the education and training awards that it makes itself and that are made by providers to whom it has delegated authority to make an award. Providers offering programmes leading to QQI awards must have their programme(s) validated in accordance with current validation policy (see www.qqi.ie).

Award standards are designed to be consistent with the NFQ’s award classes i.e. major, special purpose, supplemental and minor awards. They are expressed in terms of learning outcomes i.e. concise statements of what the learner is expected to know or be able to do in order to achieve a particular award. Learning outcomes for FET awards are contained within the associated specifications:
AWARD CLASS  
Major Award  
Supplemental Award  
Special Purpose  
Minor Award  

STANDARDS  
Certificate Specification  
Supplemental Specification  
Specific Purpose Specification  
Component Specification  

AWARDS  
Certificate (Levels 1 to 5)  
Advanced Certificate (Level 6)  
Supplemental Certificate (Level 3 to 6)  
Specific Purpose Certificate (Levels 3 to 6)  
Component Certificate (Levels 1 to 6)  

Award standards are thresholds, they describe standards of knowledge, skill or competence to be acquired, and where appropriate, demonstrated, by a learner before an award may be made.

Award standards will be reviewed from time to time as necessary. Minor changes may be made by the QQI executive outside the review cycle where necessary. Changes to standards are published on QQI’s website. Providers with validated programmes and providers with delegated authority to make awards are responsible for monitoring relevant standards and making necessary responses to changes.

3. FET Credit

Every FET certificate and component specification includes an FET credit value (Table 1). FET credit is quantified in multiples of 5 FET credits (up to 50 hours of learner effort). Learner effort is based on the time taken by typical learners at the level of the award to achieve the learning outcomes for the award. It includes all learning time involved including: guided learning hours, self-directed learning and assessment.

Guide to Level

Learning outcomes at this level include a broad range of skills that require some theoretical understanding. The outcomes may relate to engaging in a specific activity, with the capacity to use the instruments and techniques relating to an occupation. They are associated with work being undertaken independently, subject to general direction.
